SMARTER BY DESIGN

BOOST ST™ STRING PINSETTER

“Boost ST saves us 54 mechanic hours per week—over \$90,000 annually. Downtime dropped 97%, from three calls per hour to three per day. Average stop time fell from 15 to 7 minutes, recovering \$10,000 in lost revenue annually.”

DANA SORENSEN, HUDSONVILLE LANES

UNMATCHED RELIABILITY, PROVEN PERFORMANCE

Built on the proven GS Series foundation, Boost ST™ simplifies operations with Smart Automation—continuously tracking key system functions and applying automated optimizations to enhance reliability, efficiency, and uptime.

Designed for low maintenance and high efficiency, Boost ST cuts energy use by 70%, reduces operating expenses by minimizing labor requirements and technician hours, and stays up to date with cloud-enabled software updates—no hardware upgrades needed.

Its intuitive design ensures easy operation with minimal training. The 360 Controller and Pronto app simplify troubleshooting, while exclusive on-demand pinsetting offers unmatched control for bowlers and staff. Boost ST is USBC-certified for pin action and scoring consistency that matches free-fall performance and is designed for safety, with all adjustments and detangling done from the rear—no need to climb into the machine or onto the lanes.

With up to 99.99% of frames bowled without stoppages, Boost ST keeps lanes running so operators can focus on guest experience and profitability.

PRONTO TECHNOLOGY

Real-time alerts and guided troubleshooting helps reduce downtime, improve response times, and keep staff focused on guest service.

360 CONTROLLER

The future-ready 360 Controller delivers the most intuitive touchscreen system for real-time monitoring and remote updates.

PRECISE STRING LENGTH OPTIMIZATION (PSO)

Seamlessly switches between league and open play, reducing lane stoppages and improving center efficiency.

ADAPTIVE SELF-DETANGLING

Automatically clears up to 99.99% of tangles, minimizing manual intervention.

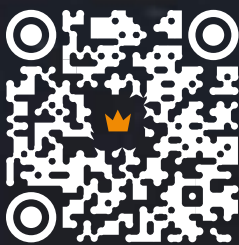

BALL ACCELERATOR

With 50,000+ units in use, it delivers fast, reliable ball returns and smooth frame transitions. Engineered for efficiency, it outpaces traditional gravity-fed systems, ensuring quicker cycle times and uninterrupted play.
